Serial No.: Unassigned Filed: Herewith Page: 3 of 7

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

- 1. (Original) A method for administering carbon monoxide to a patient, comprising the steps of a) administering exogenous carbon monoxide to the patient, b) determining the concentration of carbon monoxide in the patient's blood, c) comparing the actual concentration of carbon monoxide in the blood with a preset, desired value; and d) subsequently adjusting the amount of carbon monoxide delivered to the patient to obtain a concentration in the patient's blood corresponding to the preset desired value; and optionally repeating steps b)-d).
- 2. (Original) The method according to claim 1 wherein the concentration of carbon monoxide in the blood is determined by a method selected from the group consisting of: measuring the concentration of carboxyhemoglobin (HbCO) in the blood, measuring the concentration of oxyhemoglobin (Hb02) in the blood, measuring the activity of enzymes in the blood; and measuring the CO content of the air expired by the patient.
- 3. (Original) The method according to claim 2 wherein the carboxyhemoglobin (HbCO) is determined by non-invasive measurement, or is determined from a blood sample.
- 4. (Original) The method according to claim 2 wherein the measurement of the oxyhemoglobin (HbO2) in the blood is carried out by oxymetry.
- 5. (Original) The method according to claim 2 wherein the measurement of the composition of the expired air is carried out by spectroscopic or electrochemical methods.

Serial No.: Unassigned Filed: Herewith Page: 4 of 7

6. (Currently Amended) The method according to any one of the preceding claims claim 1 wherein the carbon monoxide is delivered to a patient as a pure gas, in a gas mixture, dissolved in a fluid, or by administering a carbon monoxide donor.

- 7. (Currently Amended) The method according to any one of the preceding claims claim 1 wherein the carbon monoxide is delivered to the patient through inhalation, insufflation, intravenously, or rectally.
- 8. (Original) The method according to claim 6 wherein the carbon monoxide containing gas mixture is administered by way of admixing it into the breathing air of a patient.
- 9. (Currently Amended) The method according to claim 7 or 8 wherein the carbon monoxide is delivered for inhalation in pulses, wherein the pulses may be inspiration and/or expiration triggered.
- 10. (Currently Amended) The method according to claim 8 or 9 wherein the concentration of carbon monoxide in the blood is controlled by the oxygen content of the breathing gas.
- 11. (Original) The method according to claim 8 wherein the administration of carbon monoxide is performed via sequences of pulses, wherein the number and length of the pulses in each sequence and/or the number of sequences is regulated depending on the determination of the concentration of carbon monoxide in the blood.
- 12. (Currently Amended) The method according to any one of the preceding claims claim 1 wherein the patient is spontaneously breathing or artificially breathing.

Serial No.: Unassigned Filed: Herewith Page: 5 of 7

13. (Currently Amended) The method according to any one of the preceding claims claim 1 wherein the concentration of carbon monoxide in the blood is determined by at least two separate methods of measurement.

- 14. (Original) An apparatus for administering carbon monoxide to a patient, the apparatus comprising a delivering unit, a carbon monoxide source, a dosing unit for administering carbon monoxide to the patient, sensor means for determining the concentration of carbon monoxide in the blood, and control means for regulating the dosing unit depending on feedback from the sensor unit.
- 15. (Original) The apparatus according to claim 14, wherein the carbon monoxide source is a source providing carbon monoxide gas, optionally in a mixture with one or more other gases, and wherein the dosing unit is for administering the carbon monoxide gas or the carbon monoxide containing gas mixture into the breathing gas mixture of a patient.
- 16. (Currently Amended) The apparatus according to any one of claims 14 or 15 claim 14 wherein the delivering unit is selected from the group consisting of a respirator, a ventilator, a face mask, and a nose cannula.
- 17. (Currently Amended) The apparatus according to any one of claims 14 to 16 eharacterised in that claim 14 wherein the apparatus comprises at least two independently working sensor means for the determination of carbon monoxide in the blood.
- 18. (Currently Amended) The apparatus according to any one of claims 14 to 17 claim 14 wherein at least one of the sensor means is connected to an alarm unit.
 - 19. (Currently Amended) The apparatus according to any one of claims 14 to 18

Serial No.: Unassigned Filed: Herewith Page: 6 of 7

claim 14 wherein the sensor means are selected from the group consisting of: means for measuring the concentration of carboxyhemoglobin (HbCO), means for measuring the concentration of oxyhemoglobin (Hb02) in the blood, means for measuring the activity of enzymes in the blood; and means for measuring the composition of the air expired by the patient.

- 20. (Currently Amended) The apparatus according to any one of claims 14 to 19 claim 14 further comprising a filter unit through which the air expired by the patient is passed in order to remove excess carbon monoxide from the expired gas, wherein the filter is a physical or a chemical filter.
- 21. (Currently Amended) Use of a delivering unit, a carbon monoxide source, a dosing unit for administering carbon monoxide to a patient, a sensor means for determining the concentration of carbon monoxide in the blood, a control means for regulating a carbon monoxide dosing unit, or a filter unit suitable to remove excess carbon monoxide from expired gas, said filter being a physical or chemical filter, in a method according to any one of claims 1-13 claim 1.
